New Topcoat Speeds Available!

Instead of a one size fits all approach, we now have Cyclospartic Topcoat available in 2 speeds. **Original Slow** and **Super Slow**. This change makes the product more user friendly and alleviates difficulties some have had.

Original Slow is ideal in most conditions including cold weather applications.

Super slow is formulated for high temperature and high humidity applications or where longer working time is essential. When used at cooler temps it will have a longer return to service.

Updated Technical Data Sheets are available on DASH.
