## **Tech Tip Tuesday**

Setup and test tools and equipment before going to a job site.

Anytime you get new tools and equipment or haven't used them in a while be sure to setup and test them to make sure they work properly before heading to the job site.

Make sure you understand the functions of your tools and equipment and how to use those functions properly.

Read the owners/user manual. Have the manual at the job site with you in case you ever have to troubleshoot any problems.

Having all your tools and equipment in proper working order will help keep downtime to a minimum and help keep your profits at a maximum.

Keep up the good work!
